PHISHING INVESTIGATION
CASE FILE

Analyst	**Aman Kumar Rai**
Date	**April 2026**
Total Samples	**5 Verified Phishing URLs**
Sources	**PhishTank (verified, 2-4 days active)**
Severity	**HIGH across all samples**

1. Executive Summary

This case file presents the findings of a structured phishing investigation conducted against five verified phishing URLs sources from PhishTank between April 19-23, 2026. Each sample was analyzed using industry-standard tools including VirusTotal, URLScan.io, AbuseIPDB, and WHOIS to extract indicators of compromise (IOCs), identify attacker infrastructure, and map techniques to the MITRE ATT&CK framework.

All five samples were confirmed malicious with VirusTotal detection ratios ranging from 19 to 23 out of 91 engines. The samples targeted high-value brands including Bank of America, Netflix, Amazon Prime, and generic credential portals, as well as a Portuguese-language enterprise target.

Key Findings

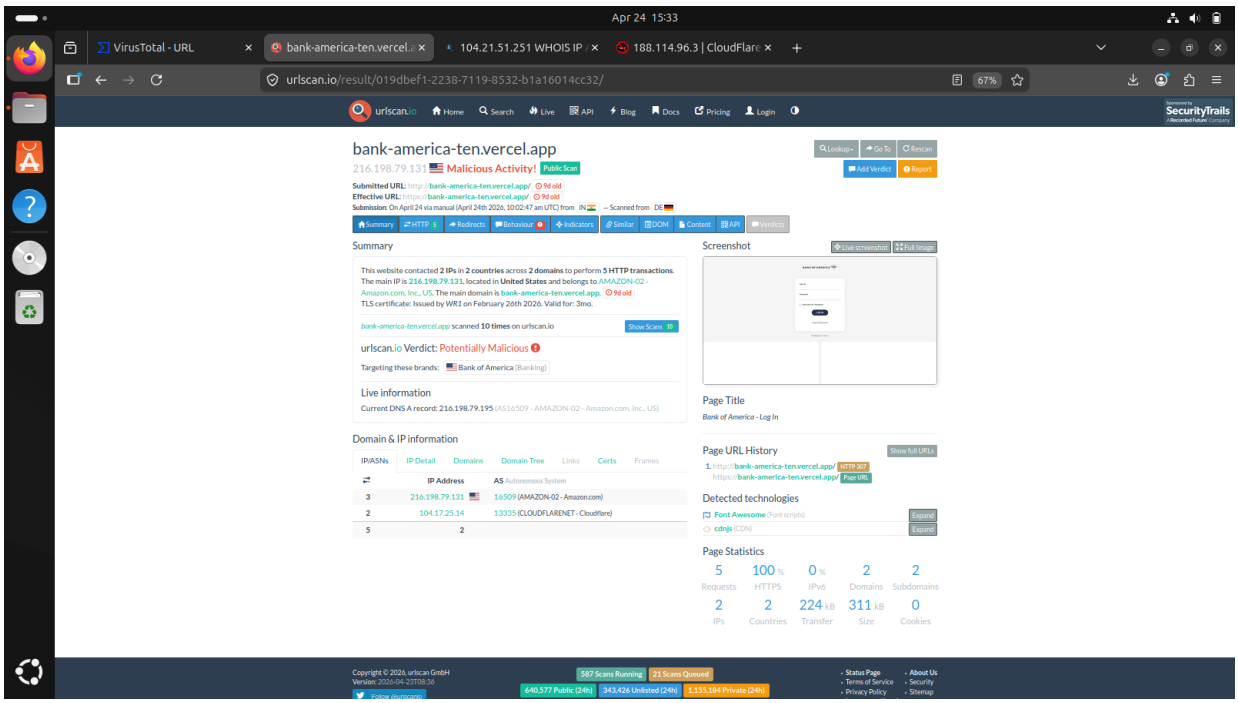
- Infrastructure overlap detected: 3 of 5 phishing sites (PHI-002, PHI-003, PHI-004) share the same hosting IP address (45.74.47.19, SLAYER GROUP LIMITED), strongly indicating a single threat actor operating a multi-brand phishing campaign.
- All domains were newly registered (7-17 days old), confirming purpose-built infrastructure for these specific phishing campaigns.
- PHI-004 actively blocks automated security scanners with a 403 Forbidden response — an evasion technique indicating above-average attacker sophistication.
- PHI-005 deploys triple-layer Cloudflare proxying, completely masking the true origin server IP — the most technically sophisticated sample in the set.
- Free TLS certificates were present on 4 of 5 samples, enabling HTTPS padlocks to deceive victims into believing sites are legitimate.

2. Individual Sample Analyses

PHI-001 - Bank of America Credential Harvest

Sample

Case ID	PHI-001
URL	http://bank-america-ten.vercel.app
Category	Bank Phishing / Credential Theft
Target Brand	Bank of America
Date Analyzed	April 2026
Source	PhishTank (verified, active)



Tool Findings

VirusTotal	23/91 engines — MALICIOUS
Serving IP	216.198.79.67
Hosting	Amazon AWS (AS16509, AMAZON-02)
URLScan.io	2 IPs contacted: 216.198.79.67 (AWS) + 104.17.25.14 (Cloudflare)
Infrastructure	Cloudflare proxy layer + Amazon AWS backend
Originating IP	216.198.79.67
SPF	NONE

DKIM	NONE
DMARC	NONE
WHOIS	Free Vercel subdomain — no registration trace
AbuseIPDB	100% confidence — 10 reports
ISP	Vercel, Inc.

Notes

The attacker leveraged a free Vercel subdomain (bank-america-ten.vercel.app) to impersonate Bank of America. Cloudflare was layered in front of the AWS backend — two legitimate platforms used to appear credible and evade URL-based filters. The absence of all three email authentication records (SPF/DKIM/DMARC) is a definitive indicator of spoofing. No legitimate financial institution uses free hosting subdomains.

Indicators of Compromise

IOC TYPE	VALUE	CONFIDENCE	TOOL SOURCE
URL	bank-america-ten.vercel.app	**HIGH**	VirusTotal / URLScan
IP Address	216.198.79.67 (AWS)	**MEDIUM**	URLScan.io
IP Address	104.17.25.14 (Cloudflare)	**LOW**	URLScan.io
Hosting Platform	Vercel, Inc.	**HIGH**	WHOIS

MITRE ATT&CK Mapping

TECHNIQUE ID	NAME	DESCRIPTION
T1566.002	Spearphishing Link	URL delivered via phishing to steal bank credentials
T1583.001	Acquire Infrastructure	Free Vercel subdomain, zero cost and registration
T1090.002	Proxy	Cloudflare used as proxy layer to hide origin server

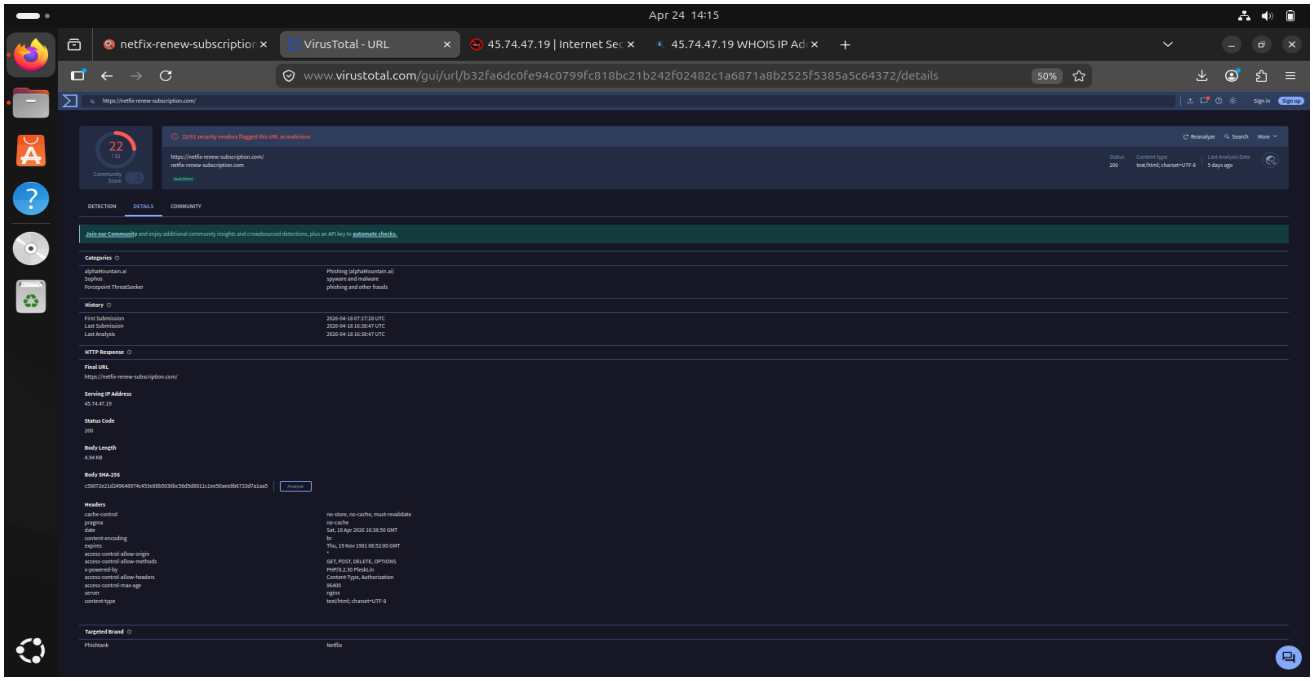
Recommendations

- Block domain: bank-america-ten.vercel.app at DNS and email gateway.
- Alert users: Bank of America never uses vercel.app domains for any official communication.
- Write detection rule: Flag any *.vercel.app, *.netlify.app domains in emails claiming to be from financial institutions.
- Report to Bank of America abuse team and Vercel trust & safety.

PHI-002 - Netflix Subscription Renewal Scam

Sample

Case ID	PHI-002
URL	https://netfix-renew-subscription.com
Category	Subscription Renewal Scam
Target Brand	Netflix (typosquat: netfix vs netflix)
Date Analyzed	April 2026
Domain Age	9 days old (registered April 15, 2026)



Tool Findings

VirusTotal	22/91 engines — MALICIOUS
Serving IP	45.74.47.19
Hosting	SLAYER GROUP LIMITED (AS213441, GB)
URLScan.io	4 IPs, 3 domains, 22 HTTP transactions
Infrastructure	Slayer (primary) + Amazon AWS + Google Cloud
TLS Certificate	Issued R13, Oct 9 2025 — predates domain registration (anomalous)
Domain Age	9 DAYS OLD — purpose-built for this campaign
WHOIS Registrar	Hosting Concepts B.V. (Registrar.eu)
AbuseIPDB	1% confidence — 3 reports
ISP	Internet Security — US OH

Notes

This sample demonstrates a classic typosquatting attack — replacing 'netflix' with 'netfix' (missing the letter L). The domain is only 9 days old, confirming it was purpose-built for this specific campaign. Notably, the TLS certificate predates the domain registration, suggesting infrastructure recycling from a previous campaign. The attacker distributed load across three separate cloud providers (Slayer, Amazon, Google Cloud), making the site appear more legitimate and harder to block via single-vendor abuse reports.

Indicators of Compromise

IOC TYPE	VALUE	CONFIDENCE	TOOL SOURCE
URL	netfix-renew-subscription.com	**HIGH**	VirusTotal / URLScan
IP Address	45.74.47.19 (SLAYER GROUP)	**HIGH**	URLScan.io / VT
IP Address	35.89.72.88 (Amazon AWS)	**MEDIUM**	URLScan.io
IP Address	35.186.247.156 (Google Cloud)	**MEDIUM**	URLScan.io
Domain	netfix-renew-subscription.com	**HIGH**	WHOIS

MITRE ATT&CK Mapping

TECHNIQUE ID	NAME	DESCRIPTION
T1566.002	Spearphishing Link	Phishing URL targeting Netflix subscribers
T1583.001	Acquire Infrastructure	9-day-old domain, purpose-registered
T1036.005	Masquerading	Typosquat domain mimicking Netflix brand

Recommendations

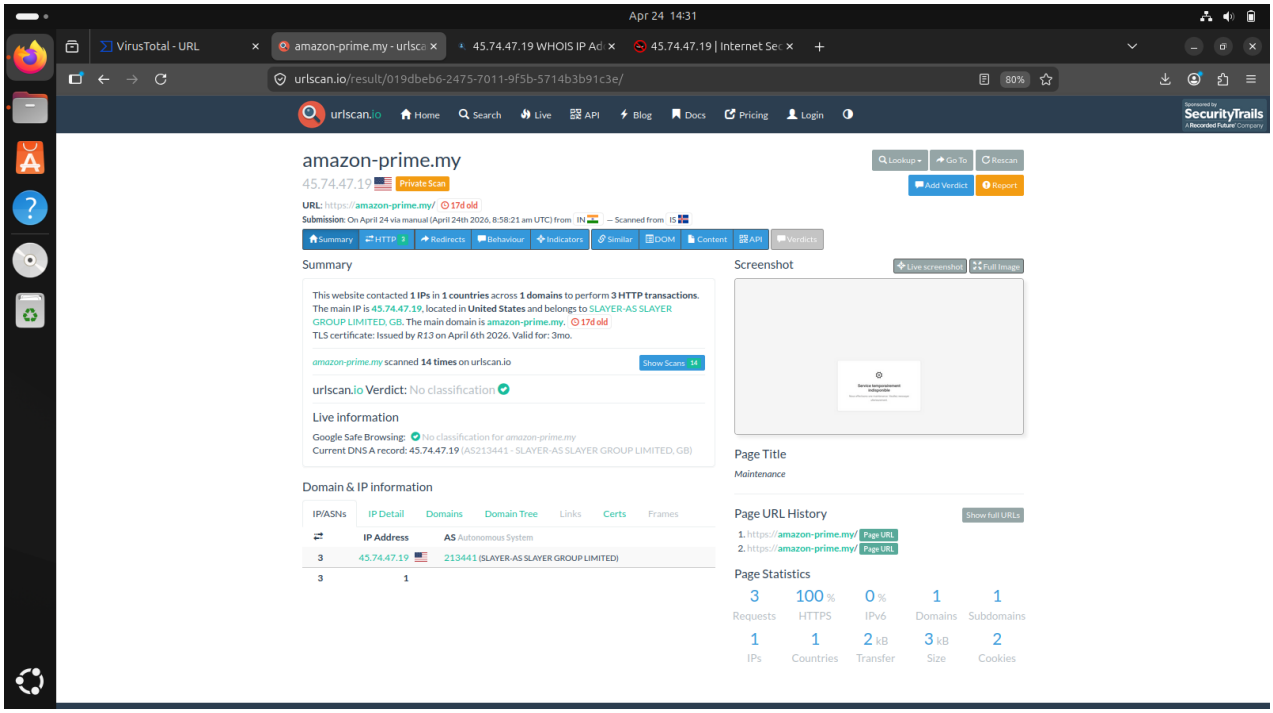
- Block domain: netfix-renew-subscription.com immediately.
- Block IP: 45.74.47.19 — also affects PHI-003 and PHI-004 (see infrastructure overlap).
- User awareness: HTTPS padlock and professional design do NOT confirm legitimacy.
- Detection rule: Flag domains containing 'netfix', 'netlfix', 'netfl1x' in all emails.

PHI-003 - Amazon Prime Payment Scam

CRITICAL FINDING: Same IP as PHI-002 — Infrastructure Overlap Confirmed

Sample

Case ID	PHI-003
URL	https://amazon-prime.my
Category	E-commerce / Payment Scam
Target Brand	Amazon Prime
Domain TLD	.my (Malaysia) — non-standard TLD for evasion
Domain Age	17 days old (registered April 6, 2026)



Tool Findings

VirusTotal	21/91 engines — MALICIOUS
Serving IP	45.74.47.19 (SAME AS PHI-002)
Hosting	SLAYER GROUP LIMITED (AS213441)
URLScan.io	1 IP, 1 domain, 3 HTTP transactions (minimal footprint)
TLS Certificate	Issued R13, April 6 2026
Domain Age	17 DAYS OLD
WHOIS Registrar	Dynadot LLC, California US
AbuseIPDB	1% confidence — 3 reports
ISP	Internet Security — US OH

Notes

PHI-003 shares the same hosting IP (45.74.47.19) and hosting provider (SLAYER GROUP LIMITED) as PHI-002. This infrastructure overlap is a high-confidence indicator that both campaigns are operated by the same threat actor. The use of a .my (Malaysia) TLD for a site impersonating Amazon Prime is a deliberate evasion technique - my domains attract less automated scrutiny than .com typosquats. The extremely minimal page footprint (only 3 HTTP transactions) suggests a lightweight, fast-loading credential capture page designed for rapid deployment and easy hosting migration.

Indicators of Compromise

IOC TYPE	VALUE	CONFIDENCE	TOOL SOURCE
URL	amazon-prime.my	**HIGH**	VirusTotal / URLScan
IP Address	45.74.47.19 (SLAYER) — shared with PHI-002	**HIGH**	URLScan.io
Domain	amazon-prime.my	**HIGH**	WHOIS / VirusTotal

MITRE ATT&CK Mapping

TECHNIQUE ID	NAME	DESCRIPTION
T1566.002	Spearphishing Link	Phishing URL targeting Amazon Prime users
T1583.001	Acquire Infrastructure	17-day-old domain, non-standard TLD
T1036.005	Masquerading	Amazon brand impersonation via domain name

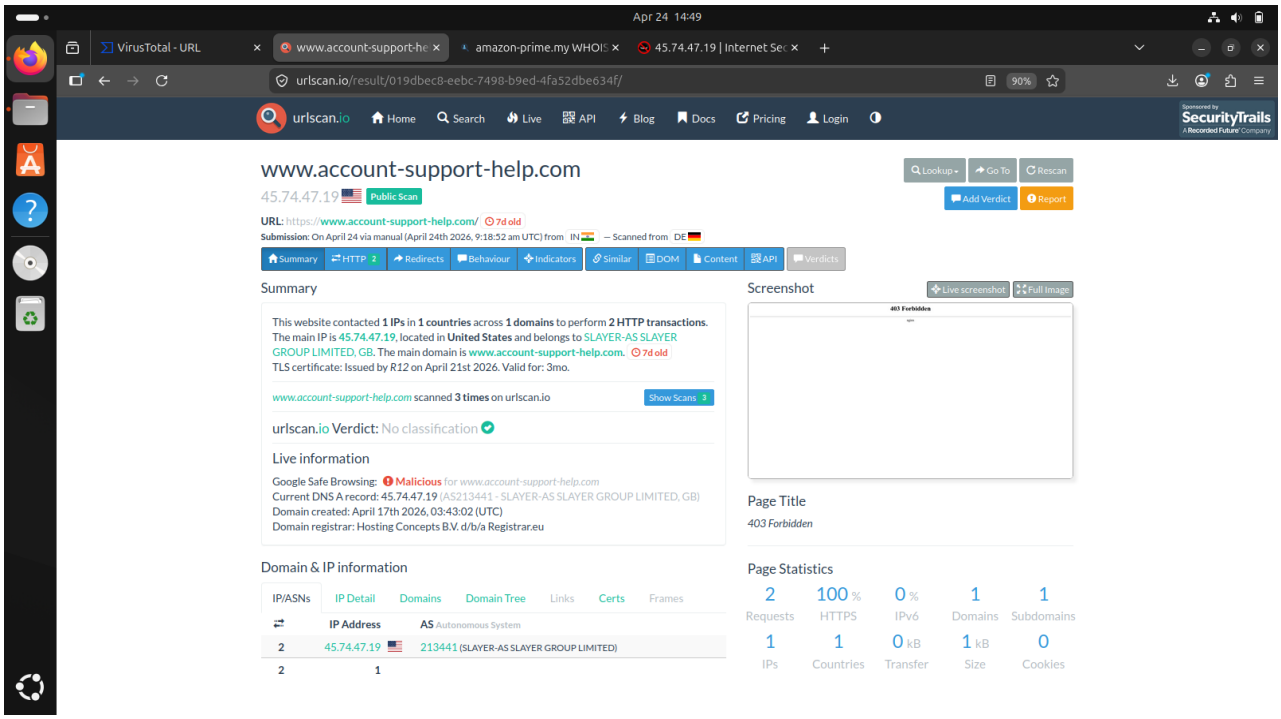
Recommendations

- Block domain: amazon-prime.my at DNS level.
- Block IP 45.74.47.19 — this single block takes down PHI-002, PHI-003, AND PHI-004.
- Detection rule: Flag amazon-* domains with non-standard TLDs (.my, .tk, .xyz, .top).
- Report to Amazon brand protection and Dynadot abuse team.

PHI-004 - Generic Credential Harvest

Sample

Case ID	PHI-004
URL	https://www.account-support-help.com
Category	Credential / Account Verification Phish
Target Brand	Generic — targets any platform's users
Domain Age	7 days old (registered April 17, 2026) — freshest domain



Tool Findings

VirusTotal	19/91 engines — MALICIOUS
Serving IP	45.74.47.19 (SAME AS PHI-002 and PHI-003)
Hosting	SLAYER GROUP LIMITED (AS213441)
URLScan.io	1 IP, 1 domain, only 2 HTTP transactions
TLS Certificate	Issued R12, April 21 2026
Domain Age	7 DAYS OLD — most recent in the campaign
WHOIS Registrar	Hosting Concepts B.V. (Registrar.eu)
AbuseIPDB IP	45.74.47.19 — 1% / 3 reports
AbuseIPDB Location	Frankfurt am Main, Germany (physical server)

Notes

PHI-004 is the third site confirmed on 45.74.47.19, definitively establishing a shared attacker infrastructure network. This is a deliberate and technically-informed evasion technique. The generic domain name (account-support-help.com) is brand-neutral, allowing the same phishing kit to be reused against victims of any platform. Note that AbuseIPDB shows the physical server in Frankfurt, Germany despite the US-based routing — another layer of geographic obfuscation.

Indicators of Compromise

IOC TYPE	VALUE	CONFIDENCE	TOOL SOURCE
URL	`account-support-help.com`	**HIGH**	VirusTotal
IP Address	`45.74.47.19 — shared with PHI-002, PHI-003`	**HIGH**	URLScan.io
Domain	`account-support-help.com`	**HIGH**	WHOIS
Physical Location	`Frankfurt, Germany (actual server)`	**MEDIUM**	AbuseIPDB

MITRE ATT&CK Mapping

TECHNIQUE ID	NAME	DESCRIPTION
`T1566.002`	Spearphishing Link	Generic credential capture phishing page
`T1583.001`	Acquire Infrastructure	7-day-old domain, fresh campaign
`T1036.005`	Masquerading	Brand-neutral domain targets all platform users

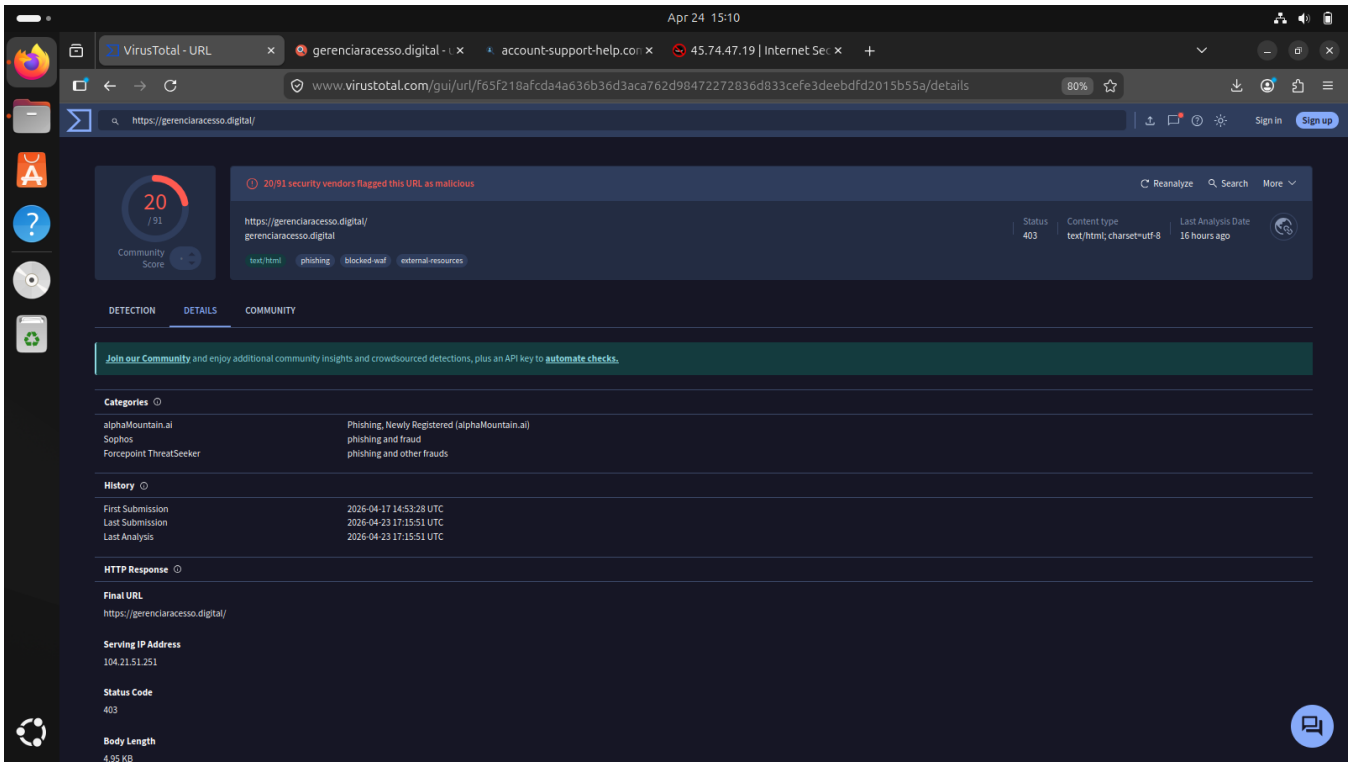
Recommendations

- Block domain: account-support-help.com.
- Block IP 45.74.47.19 — eliminates this site plus PHI-002 and PHI-003 simultaneously.
- Detection rule: 'account-support-help' pattern — no legitimate company uses this naming.
- Note in threat intel: attacker uses bot detection. Manual analysis required for this domain.

PHI-005 - BEC (Business Email Compromise) Impersonation

Sample

Case ID	PHI-005
URL	https://gerenciaracesso.digital
Category	BEC / Enterprise Credential Impersonation
Target Language	Portuguese (Brazil / Portugal corporate users)
Domain Meaning	gerenciaracesso = 'manage access' in Portuguese
Domain Age	11 days old (registered April 13, 2026)



Tool Findings

VirusTotal	20/91 engines — MALICIOUS
Flagged By	alphaMountain (Phishing + Newly Registered), Sophos, Forcepoint
Serving IP	104.21.51.251 (Cloudflare proxy)
URLScan.io IP	188.114.96.3 (Cloudflare proxy) — different IP each scan
Infrastructure	ALL CLOUDFLARE: 3 separate proxy IPs
Additional IPs	104.18.95.41 + 104.18.94.41 (both Cloudflare)
True Origin IP	UNKNOWN — hidden behind triple Cloudflare proxy
TLS Certificate	Issued E7, April 13 2026

Domain Age	11 DAYS OLD
WHOIS Registrar	Cloudflare (registered AND proxied through Cloudflare)
AbuseIPDB 104.21	0% — 1 report (Cloudflare shared)
AbuseIPDB 188.114	0% — 846 reports (heavily abused Cloudflare IP)

Notes

PHI-005 is the most sophisticated sample in this set. The domain 'gerenciaracesso.digital' translates to 'manage access' in Portuguese, specifically targeting Brazilian or Portuguese corporate employees with a believable enterprise login portal lure. The attacker registered the domain through Cloudflare and proxied it through Cloudflare, creating a double layer of obscurity with the same vendor. Three distinct Cloudflare IP addresses were observed across tools, all returning 0% AbuseIPDB scores due to shared infrastructure — making IP-based blocking impossible. The real hosting server's IP is completely undiscoverable without a legal subpoena to Cloudflare

Indicators of Compromise

IOC TYPE	VALUE	CONFIDENCE	TOOL SOURCE
URL	gerenciaracesso.digital	**HIGH**	VirusTotal / URLScan
IP Address	188.114.96.3 (Cloudflare proxy)	**MEDIUM**	URLScan.io
IP Address	104.21.51.251 (Cloudflare proxy)	**MEDIUM**	VirusTotal
IP Address	104.18.95.41 (Cloudflare proxy)	**LOW**	URLScan.io
Domain	gerenciaracesso.digital	**HIGH**	WHOIS / VirusTotal
True Origin IP	Unknown — masked by Cloudflare	**N/A**	N/A

MITRE ATT&CK Mapping

TECHNIQUE ID	NAME	DESCRIPTION
T1566.002	Spearphishing Link	Enterprise credential phish, Portuguese language
T1583.001	Acquire Infrastructure	11-day-old digital domain, targeted TLD choice
T1036.005	Masquerading	Corporate 'manage access' language and branding
T1090.002	Proxy	Triple Cloudflare proxy, origin IP fully concealed

Recommendations

- Block domain: gerenciaracesso.digital at DNS and email gateway.
- IP blocking is NOT effective — all IPs are shared Cloudflare infrastructure.
- Alert Portuguese-speaking staff and partners specifically about this targeted campaign.
- Detection rule: Flag digital TLD domains in emails from unknown external senders.
- Submit to Cloudflare Trust & Safety for origin server investigation and takedown.
